Diversity

- ▶ Tech Bros / Machine Learning Hipsters
- ▶ Coding Grace
- ▶ Beer and Pizza? Worth it?

Coding Grace are a group of developers based in Ireland who love to code and do other geeky and not necessarily crafty activities. Some of us code full-time, or just for fun (or both). We have people who are part of other technical user groups such as [Dublin ALT.NET](#), [GameCraft](#), [Python Ireland](#), [Ruby Ireland](#) and more...

We provide female-friendly workshops and events in an environment for developers and aspiring developers mentored by majority female instructors.

Where many events tend to have more males than females, we aim to encourage many females to come along to our workshops and learn to code and more. We also encourage any females who want to mentor technical material to help out, it's not that scary after all.

Invited Talks

We are excited to announce the invited speakers useR! 2015 in Aalborg! The line-up consists of [Thomas Lumley](#) (R Core, Survey), [Adrian Baddeley](#) (Spatstat), [Steffen Lauritzen](#) (gRaphical models), [Di Cook](#) (GGobi), [Romain François](#) (R/C++) and [Susan Holmes](#) (phyloseq).

Registration

The registration for useR! 2015 is now open: [useR! 2015 registration page!](#)

	Student	Academic	Industry
Early (before 10 May 2015)	€125	€275	€425
Regular (before 01 June 2015)	€150	€325	€475
Late (before 21 June 2015)	€200	€375	€525
On-Site	€250	€525	€675

The registration page allows for both purchasing conference tickets as well as (optional) accommodation at pre-booked hotels within a single order. **Tutorials are included with the conference ticket!**

2015 Keynote Speakers: [Alex Bellos](#), [Joe Cheng](#) and [Dirk Eddelbuettel](#)

Alex Bellos is an author and broadcaster. His popular mathematics books *Alex's Adventures in Numberland* and *Alex Through the Looking-Glass* are both bestsellers and have been translated into more than 20 languages. He also writes a maths blog for the Guardian and presents science documentaries for Radio 4. Before moving into science writing he was the South America correspondent for the Guardian. He is the author of *Futebol: The Brazilian Way of Life* and ghost-wrote Pelé's autobiography.

Joe Cheng is a software engineer who joined J.J. Allaire at RStudio in 2009 to help create the RStudio integrated development environment. He is best known for creating Shiny, the reactive web application framework for R; and RPubS, a well known document publishing service. Joe has spent most of his career working for Boston-area tech startups, plus a stint at Microsoft prior to joining RStudio.

Dirk Eddelbuettel is the author / maintainer of Rcpp, RQuantLib, digest and two dozen more CRAN packages. He is a (voting) member of the R Foundation, maintains the CRAN Task Views for Finance as well as High-Performance Computing, contributes to Debian as a package maintainer, and serves as an editor for the Journal of Statistical Software. He has a PhD in Econometrics from EHESS, and works in Chicago as quantitative analyst focussed on predictive models for financial markets.

R in Insurance

Amsterdam, 29 June 2015

On the day after this event, June 30th, the workshop
"Rob in Insurance"
will be organized by the University of Amsterdam, on the
occasion of the 65th birthday of professor
Rob Kaas.

Call for papers

We are cordially inviting you to submit papers to and attend the International Workshop New Challenges for Statistical Software - The Use of R in Official Statistics.

The workshop will be held in Bucharest-ROMANIA, on March 27, 2014.

The purpose of the workshop is to provide a public forum for researchers from academia and institutes of statistics to present, exchange ideas and discuss developments in state-of-the-art statistical software commonly used in applied economics and statistics. The most focused debates are expected to be the use of R in official Statistics.

All the research proposals/papers will be published in a special issue in

Introduction to Statistical Disclosure Control (SDC)

Vienna, July 18, 2014

Welcome to the R Implementation, Optimization and Tooling Workshop

R is a programming language for statistical computing, with thousands of packages available in open-source repositories and over 2 million users in both academia and industry. Its current reference implementation, though very successful and heavily optimized over a number of years, is not without some limitations, which motivated creation of alternative implementations of the R language (e.g. FastR, Renjin, TERR, CXXR).

RIOT 2015 is a one-day workshop dedicated to exploring future directions for development of R language implementations and tools. The goals of the workshop include, but are not limited to, sharing experiences of developing different R language implementations and tools and evaluate their status, exploring possibilities for increasing involvement of the R users community in the efforts of constructing different R implementations, identifying R language development and tooling opportunities enabled by the emerging implementations, and discussing future directions for the R language. The workshop will consist of a number of short talks and discussions and will bring together developers of R language implementations and tools.

(This article was first published on [Why? » R](#), and kindly contributed to [R-bloggers](#))

Part of the reason R has become so popular is the vast array of packages available at the [cran](#) and [bioconductor](#) repositories. In the last few years, the number of packages has grown exponentially!

This is a short post giving steps on how to actually install R packages. Let's suppose you want to install the `ggplot2` package. Well nothing could be easier. We just fire up an R shell and type:

```
> install.packages("ggplot2")
```

In theory the package should just install, however:

R among top languages on GitHub

The site github.info provides quarterly statistics on programming language activity on GitHub, by number of repositories, pushes, forks etc. Ranked by number of active repositories on [GitHub](#), R is the 12th most popular programming language as of Q4 2014. JavaScript, Java and Python appear as the top 3 in the same list.

Statistics and R for the Life Sciences

An introduction to basic statistical concepts and R programming skills necessary for analyzing data in the life sciences.

About this Course

We will learn the basics of statistical inference in order to understand and compute p-values and confidence intervals. We will provide examples by programming in R in a way that will help make the connection between concepts and implementation. Problems sets requiring R programming will be used to test understanding and ability to implement basic data analyses. We will use visualization techniques to explore new data sets and determine the most appropriate approach. We will describe robust statistical techniques as alternative when data do not fit assumptions required by the standard approaches. We will

...m/watch?v=nwFylxc4AE0

conduct reproducible research.
