

UNIVERSITY *of* LIMERICK

OLLSCOIL LUIMNIGH

KEMMY BUSINESS SCHOOL

Department of Economics

End of Term Assessment

ACADEMIC YEAR: Autumn, 2008/09

MODULE CODE: EC4307

DURATION OF EXAMINATION: 2.5 hours

MODULE TITLE: ECONOMETRICS

PERCENTAGE OF TOTAL MARKS: 60% (Remaining 40% awarded for two course work assignments)

LECTURER: Declan Dineen

EXTERNAL EXAMINER: Dr Lisa De Propriis

INSTRUCTIONS TO CANDIDATES:

- Answer 3 (THREE) questions only out of the 6 (SIX) questions on this exam paper.
 - Answer *at least* ONE question from SECTION A and *at least* ONE question from SECTION B.
 - Put your answers to Section A and Section B in SEPARATE ANSWER BOOKS.
 - All answers should be concise and relevant.
 - All questions carry equal marks. Marks awarded for individual parts of each question are indicated on the paper.
 - All rough work to be handed up with the exam paper.
 - Non-programmable calculators are permitted.
-

STUDENT NAME: _____

ID NUMBER: _____

COURSE OF STUDY: _____

SECTION A

- A1.** Consider the following model used to estimate how a hamburger chain's weekly revenue tr depends on price p , and advertising expenditure a

$$tr_t = \beta_1 + \beta_2 p_t + \beta_3 a_t + \varepsilon_t$$

where price p is measured in Euro while total revenue tr and advertising expenditure a are measured in Euro (000s).

The least squares output from estimating this equation appears in TABLE 1.0 below.

TABLE 1.0

| Dependent variable: | tr | | | |
|--------------------------------|-------------|------------|----------------|------------|
| Number of observations: | 52 | | | |
| Variable | Coefficient | Std. Error | t -statistic | p -value |
| <i>Intercept</i> | 104.7855 | ? | 16.16382 | 0.0000 |
| <i>Price</i> | -6.641930 | 3.191193 | ? | 0.0427 |
| <i>Advert</i> | ? | 0.166936 | 17.87689 | 0.0000 |
| R-squared | ? | | | |
| Adjusted R-squared | 0.861660 | | | |
| $\sum (y_i - \bar{y})^2$ | 13581.35 | | | |
| Sum of squared residuals (RSS) | 1805.168 | | | |

- (a) Fill in the following *blank spaces* that appear in TABLE 1.0:
- (i) The t -statistic for $\hat{\beta}_2$. (5%)
 - (ii) The standard error for $\hat{\beta}_1$. (5%)
 - (iii) The estimate $\hat{\beta}_3$. (5%)
 - (iv) The R^2 . (10%)
- (b) Calculate the estimated error variance $\hat{\sigma}_\varepsilon^2$ and standard error. (10%)
- (c) Interpret the estimates $\hat{\beta}_2$ and $\hat{\beta}_3$. Are the signs on these coefficients what you would expect from a theory or logical point of view? (10%)
- (d) Using the test of significance approach (t -test) or using the reported p -value, at the 5% level of significance, test the hypothesis that the firm's weekly revenue does not depend on advertising expenditure. (10%)

- (e) Calculate a 95% confidence interval for the true population parameter β_2 . What does the interval tell you (i.e. in what are you 95% confident)? Test the hypothesis that price has no effect on the firm's weekly revenue. (20%)
- (f) Derive the F ratio (showing the relationship between R^2 and F) and test the overall significance of the estimated equation using the F -test at the 5 per cent level of significance. (25%)

- A2.** (a) Explain the difference between a model which is linear in the *variables* and one which is linear in the *parameters* (giving examples). (15%)

Given the two-variable regression model

$$Y_i = \beta_1 + \beta_2 X_i + \varepsilon_i$$

- (b) Briefly, describe the classical linear regression model assumptions underlying the OLS estimation technique. Use well-labelled diagrams to support your answer where appropriate. (20%)
- (c) Derive the least-squares normal equations for β_1 and β_2 and proceed to derive the estimator for β_2 . (40%)
- (d) Describe the Gauss-Markov theorem and prove that the estimator for β_2 is linear and unbiased. (25%)

- A3.** (a) What is heteroscedasticity? Illustrate with the aid of a diagram(s) Discuss the consequences of heteroscedasticity for estimation and hypothesis testing using OLS estimates. (30%)

- (b) A scatter plot of the estimated squared residuals on the fitted values from a regression line is shown in FIGURE 1.0 below. Explain what the researcher hoped to achieve with this scatter plot. What does FIGURE 1.0 show?

Describe the *White's test* method which can be used to detect the presence of heteroscedasticity. (35%)

- (c) Describe the GLS/ WLS method of correcting for heteroscedasticity when σ_i^2 is known.

Consider the two-variable regression model

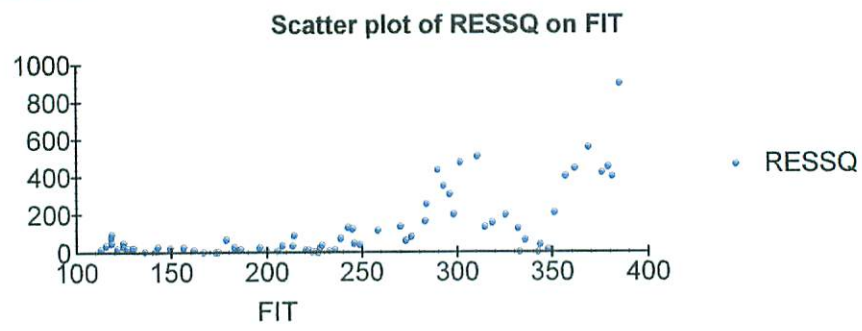

$$Y_i = \beta_1 + \beta_2 X_i + \varepsilon_i$$

Explain how the weighted or generalised least squares estimator works when:

$$\sigma_i^2 = \sigma^2 X_i^2$$

$$\sigma_i^2 = \sigma^2 X_i \quad (35\%)$$

FIGURE 1.0

where

$RESSQ$ denotes the residual squared $\hat{\varepsilon}_i^2$ and

FIT denotes the fitted values from the regression line.

SECTION B

B1. Suppose we posit the following demand for money relation

$$M0_t = \beta_1 + \beta_2 GNP_t + \beta_3 i_t + \varepsilon_t$$

where $M0_t$ = demand for money (*nominal* cash balances)

i_t = an interest rate indicator (%)

GNP_t = Gross National Product

Based on quarterly data for 1972Q1-1989Q4, the following results in TABLE 2.0 were obtained:

TABLE 2.0

Ordinary Least Squares Estimation

| | | | |
|---|-------------|----------------------------|---------------|
| ***** | | | |

Diagnostic Tests

| | |
|--|-----------------------------|
| ***** | |
| * Test Statistics | * F Version |
| ***** | |
| * A: Serial Correlation | * F(4, 65) = 111.9423[.000] |
| * B: Functional Form | * F(1, 68) = 53.1390[.000] |
| * C: Heteroscedasticity | * F(1, 70) = 65.4813[.000] |
| ***** | |
| A: Lagrange multiplier test of residual serial correlation | |
| B: Ramsey's RESET test using the square of the fitted values | |
| C: Based on the regression of squared residuals on squared fitted values | |

Plotting the estimated residuals from this regression on their values lagged one time period gives FIGURE 2.0:

FIGURE 2.0

- (a) What is autocorrelation?

How would you distinguish between “pure” autocorrelation and apparent autocorrelation resulting from specification error?

Discuss the consequences of “pure” autocorrelation for estimation and hypothesis testing using OLS estimates. (30%)

- (b) Derive the Durbin-Watson test statistic and describe how it is used to test for autocorrelation.

What are the weaknesses of this test? (25%)

- (c) What does FIGURE 2.0 show? Based on the results given in TABLE 2.0, conduct a formal test for autocorrelation in this model. Does the outcome of this test support the evidence from FIGURE 2.0? (20%)

- (d) In the presence of “pure” autocorrelation, describe the Cochrane-Orcutt method for estimating the autocorrelation coefficient ρ . (25%)

B2. Explain/ discuss the following:

- (a) What is a “stationary stochastic process?”

Look at the plot of GNP for Germany in FIGURE 3.0. Does this time series appear to be stationary? Suppose that you calculated the first-difference of this series. Would it appear to be stationary? Justify your answer. (20%)

- (b) The autocorrelation function (ACF). The general characteristics of the correlograms presented in FIGURE 4.0. (15%)

- (c) The Dickey-Fuller (DF) and Augmented DF tests. (25%)

- (d) The meaning of a series being “integrated of order 1,” that is $I(1)$. The concept of cointegration and ONE test of whether two time series are cointegrated. (25%)
- (e) A regression between two nonstationary variables can produce spurious results. If the variables are nonstationary, and not cointegrated, is there any relationship that can be estimated (mention any problems with your approach here)? (15%)

FIGURE 3.0: Gross National Product in current prices relating to the German economy.

FIGURE 4.0: Sample Autocorrelation Function (ACF)

(a) German GNP

Autocorrelation function of GNP, sample from 1972Q1 to 1989Q4

(b) Change in German GNP

Autocorrelation function of GNPCHANGE, sample from 1972Q2 to 1989Q4

- B3. (a)** What is meant by multicollinearity?
Discuss the consequences of multicollinearity for OLS estimation. (25%)
- (b)** Describe the auxiliary regression method which can be used to detect for the presence of multicollinearity. (20%)
- (c)** "A high degree of multicollinearity may have an adverse effect on regression results, but this is by no means inevitable."
Discuss this statement. (20%)
- (d)** Describe two possible remedial measures for the multicollinearity problem and, briefly, discuss any problems which might be encountered with these remedial actions. (15%)
- (e)** Suppose we fit the model

$$M0_t = \beta_1 + \beta_2 GNP_t + \beta_3 i_t + \varepsilon_t$$

where $M0_t$ = demand for money (*nominal* cash balances)
 i_t = an interest rate indicator (%)
 GNP_t = Gross National Product

Partial *Microfit* output from estimating this relation based on quarterly data for 1972Q1-1989Q4 (72 observations) appears below

```

Diagnostic Tests
*****
* Test Statistics          * F Version
*****
*
* A: Serial Correlation   * F(4, 65) = 111.9423[.000]
*
* B: Functional Form      * F(1, 68) = 53.1390[.000]

Source: This table is an extension of the original Durbin-Watson table and is reproduced from N. E. Savin and K. J. White, "The Durbin-Watson Test for Serial Correlation with Extreme Small Samples or Many Regressors," *Econometrica*, vol. 45, November 1977, pp. 1989-96 and as corrected by R. W. Farebrother, *Econometrica*, vol. 48, September 1980, p. 1554. Reprinted by permission of the Econometric Society.

Note: n = number of observations, k' = number of explanatory variables excluding the constant term.

Example. If $n = 40$ and $k' = 4$, $d_L = 1.285$ and $d_U = 1.721$. If a computed d value is less than 1.285, there is evidence of positive first-order serial correlation; if it is greater than 1.721, there is no evidence of positive first-order serial correlation; but if d lies between the lower and the upper limit, there is inconclusive evidence regarding the presence or absence of positive first-order serial correlation.

TABLE D.5a
Durbin-Watson d statistic: Significance points of d_L and d_U at 0.05 level of significance

| n | $k' = 1$ | | $k' = 2$ | | $k' = 3$ | | $k' = 4$ | | $k' = 5$ | | $k' = 6$ | | $k' = 7$ | | $k' = 8$ | | $k' = 9$ | | $k' = 10$ | |
